Mini - Project Synopsis

Date:12/06/2021

TITLE: PERSONAL CONTACT CONSOLE APPLICATION

Objectives:

To create personal contact console application to keep personal contacts

Description in points:

In order to keep record of our personal contacts a storage application is required. This program allow user to add their personal contact including name, phone number, address and email ID in txt file and allow them to edit the contact if entry has been entered incorrectly, user can delete record and also can view any record based on name of the person.

Library:

Stdio.h

String.h

Conio.h

Stdlib.h

Inputs:

User selects the task he wants to perform out of the four options add, view, edit, delete. User input the information and can exit by typing 0.

Output:

Contacts gets added and shown on choosing view option .All the records got saved in txt

Current Status of Implementation:

Two function files has been created out of 4 and whole main program is completed
